

To whom it may concern:

I would like to comment on your decision about LPFM. First of all, I want to commend you on your excellent decision on creating LPFM, I think that it's a great blessing for thousands of citizens who want to operate/own a radio station, but can't due to the fact that they lose to the big corporations who have millions of dollars.

I would like to add a few comments, if i could about LPFM:

1- I think that LPFM should be available for commercial and non-commercial use, this will give a chance for both private people to make money and for religious and/or non profit institutions to run their station.

2-That the 2nd and 3rd adjacent channel restrictions be dropped against LPFM stations, which will improve the reciever design

3- I think that the FCC should raise the LPFM from 1000 to at least 2000 watts(or 1500), since some stations want to reach a certain type of community, and that community is spread out in a few neighborhoods and 1000 watts station won't be enough to cover that community

4-The 60 meter limitation placed on LP-1000 should be increased to 100 meters, this will provide for another 2-3/4 mile coverage without additional power, therefore allowing more people to be able to listen to the station and thus giving the station more chances of surviving.

5- LPFM must not be subjected to narrower bandwith then full power FM stations, since that will effect Audio quality.

Hoping you will take my comments into consideration.

Thank You
